

# STREAMLINED LIFE CYCLE ASSESSMENT\* HAND LOTION PACKAGING CASE STUDY

## HAND LOTION PACKAGE COMPARISON

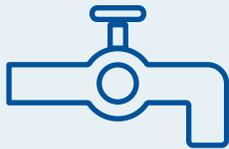

Lotion is packaged in a variety of formats, including an HDPE bottle with a pump mechanism. For the following Life Cycle Assessment study with a cradle-to-grave boundary, lotion packaged in an HDPE bottle and pump was compared to the premade STANDCAP Pouch, an award-winning inverted flexible pouch.

STANDCAP POUCH

HDPE BOTTLE

### WATER CONSUMPTION

Water use for the flexible premade STANDCAP Pouch is reduced by **50%** versus the rigid HDPE bottle. This is a result of the bottle's manufacturing process, which requires water to cool molds during production. The laminating and extruding process for the multilayer pouch is less water-intensive by comparison.

### GREENHOUSE GAS EMISSIONS

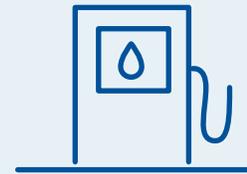

The premade STANDCAP Pouch results in a reduction of over half in GHG emissions (**-58.4%**) versus the rigid bottle. This is driven by the weight difference as well as the manufacturing process advantages for the pouch, which is less energy intensive than blow molding the HDPE bottle.

**.08726**  
KG-CO<sup>2</sup> EQUIV

**.21**  
KG-CO<sup>2</sup> EQUIV

### FOSSIL FUEL CONSUMPTION

Fossil fuel use for the premade STANDCAP Pouch results in a reduction of over half (**-61.9%**) that of the rigid bottle, with much of the difference attributed to the bottle's material impact.

**1.86**  
MJ-EQUIV

**4.88**  
MJ-EQUIV

## END OF USE SUMMARY

### SOURCE REDUCTION BENEFITS

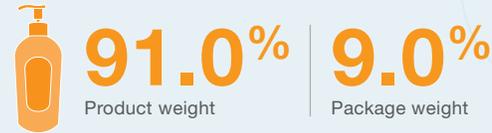

According to the U.S. EPA Waste Hierarchy, the most preferred method for waste management is source reduction and reuse.

A major benefit of flexible packaging is the high product-to-package ratio that it offers.

High product-to-package ratio:

Low product-to-package ratio:

### RECOVERY BENEFITS

STANDCAP POUCH

**1x**  
amount of material ending up as municipal solid waste

While many multi-material flexible packages are not yet recovered and recycled in any significant amount, they still result in a substantial reduction in the amount of material sent to landfill versus other types of packaging.

HDPE BOTTLE

**2.1x**  
amount of material ending up as municipal solid waste

Even when current recycling rates are considered (**31.1%**) for the bottle and the flexible packaging is assumed to have a **0%** recycling rate, the premade STANDCAP Pouch results in less material sent to landfill.

## IMPLICATIONS

The results of this scenario show that the premade STANDCAP Pouch results in lower impacts across a wide range of environmental metrics, including fossil fuel and water use, GHG emissions and discarded material. This is driven by the efficient material usage of the flexible pouch, which uses less than half the amount of material needed to package the same amount of lotion.

FORMAT	FOSSIL FUEL CONSUMPTION (MJ-EQUIV)	GHG EMISSIONS (KG-CO <sub>2</sub> EQUIV)	WATER CONSUMPTION (L)	PRODUCT-TO-PACKAGE RATIO (%)	PKG LANDFILLED ((G)/1000 KG LOTION)
STANDCAP POUCH 	1.86 <b>(-61.9%)</b>	.08726 <b>(-58.4%)</b>	26.83 <b>(-46.3%)</b>	20.3:1 <b>(95.3%:4.7%)</b>	49,223 <b>(-52.1%)</b>
HDPE BOTTLE 	4.88	.21	49.99	10.1:1	102,826
