

# STREAMLINED LIFE CYCLE ASSESSMENT\* SALAD DRESSING PACKAGING CASE STUDY

## SALAD DRESSING PACKAGE COMPARISON

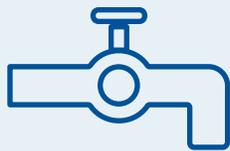

Salad dressings come in a wide array of varieties and flavors, many of which are traditionally packaged in rigid PET bottles. For this Life Cycle Assessment study with a cradle-to-grave boundary, salad dressing in a PET bottle was compared to dressing in a premade STANDCAP Pouch, an award-winning inverted flexible pouch.

STANDCAP POUCH

PET BOTTLE

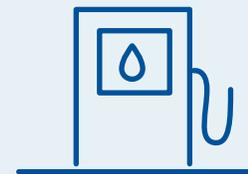

### WATER CONSUMPTION

Producing PET bottles is a water-intensive process that requires large amounts of fluid to cool the molds in the stretch blow molding manufacturing process. The premade STANDCAP Pouch format, which is formed by laminating multiple thin layers of film together, uses much less water **(-58.9%)** in its manufacturing process.

### GREENHOUSE GAS EMISSIONS

The premade STANDCAP Pouch produces about half the GHG emissions **(-53.2%)** compared to the rigid bottle. This is because it takes double the amount of material to make each bottle in a stretch blow molding process that requires additional heat.

### FOSSIL FUEL CONSUMPTION

When considering fossil fuel use, the premade STANDCAP Pouch uses just about half **(-45.4%)** the amount as the PET bottle because of the amount of material used for packaging.

## END OF USE SUMMARY

### SOURCE REDUCTION BENEFITS

According to the U.S. EPA Waste Hierarchy, the most preferred method for waste management is source reduction and reuse.

A major benefit of flexible packaging is the high product-to-package ratio that it offers.

High product-to-package ratio:

Low product-to-package ratio:

### RECOVERY BENEFITS

STANDCAP POUCH

1x

amount of material ending up as municipal solid waste

While many multi-material flexible packages are not yet recovered and recycled in any significant amount, they still result in a substantial reduction in the amount of material sent to landfill versus other types of packaging.

PET BOTTLE

1.5x

amount of material ending up as municipal solid waste

When considering how much material ends up in municipal solid waste, the premade STANDCAP Pouch results in far less material discarded (-32.6%).

## IMPLICATIONS

The premade STANDCAP Pouch has a number of sustainability benefits when compared to a PET bottle for packing and shipping salad dressing. These include lower fossil fuel and water use, GHG emissions, better product-to-package ratio and considerably less material discarded at end-of-life.

FORMAT	FOSSIL FUEL CONSUMPTION (MJ-EQUIV)	GHG EMISSIONS (KG-CO <sup>2</sup> EQUIV)	WATER CONSUMPTION (L)	PRODUCT-TO-PACKAGE RATIO (%)	PKG LANDFILLED ((G)/1000 KG SALAD DRESSING)
STANDCAP POUCH 	14.88 (-45.4%)	.6981 (-53.2%)	214.67 (-58.9%)	21.4:1 (95.5%:4.5%)	46,727 (-32.6%)
PET BOTTLE 	27.23	1.49	521.85	10.8:1	69,329
